

# Industry-Academic Forum on EMC 2020

Industry Contributions – 4 February 2020

## Trends and challenges in EMC for space applications

Johannes Wolf  
ESA ESTEC, The Netherlands

The talk will give an overview about current trends in EMC as observed by ESA. This includes trends in the verification approach as well as trends for instrumentation and measurement techniques.

Also challenges in EMC for spacecraft will be addressed in particular for science missions including magnetic cleanliness and low frequency low level emission measurements.
